## **Maximum Load: The Wrong Specification for Pulsed Power**

Jerrad Choi

*Field Application Engineer*

## Agenda

- › **Power Averaging:** Definition and Criteria
- › **Power Configuration:** Typical Approach vs. Averaging Approach
- › **Solution Sizing:** Capacitor & Power Supply Selection
- › **Power Averaging:** Configuration Example
- › Conclusions

## Power Averaging: Definition

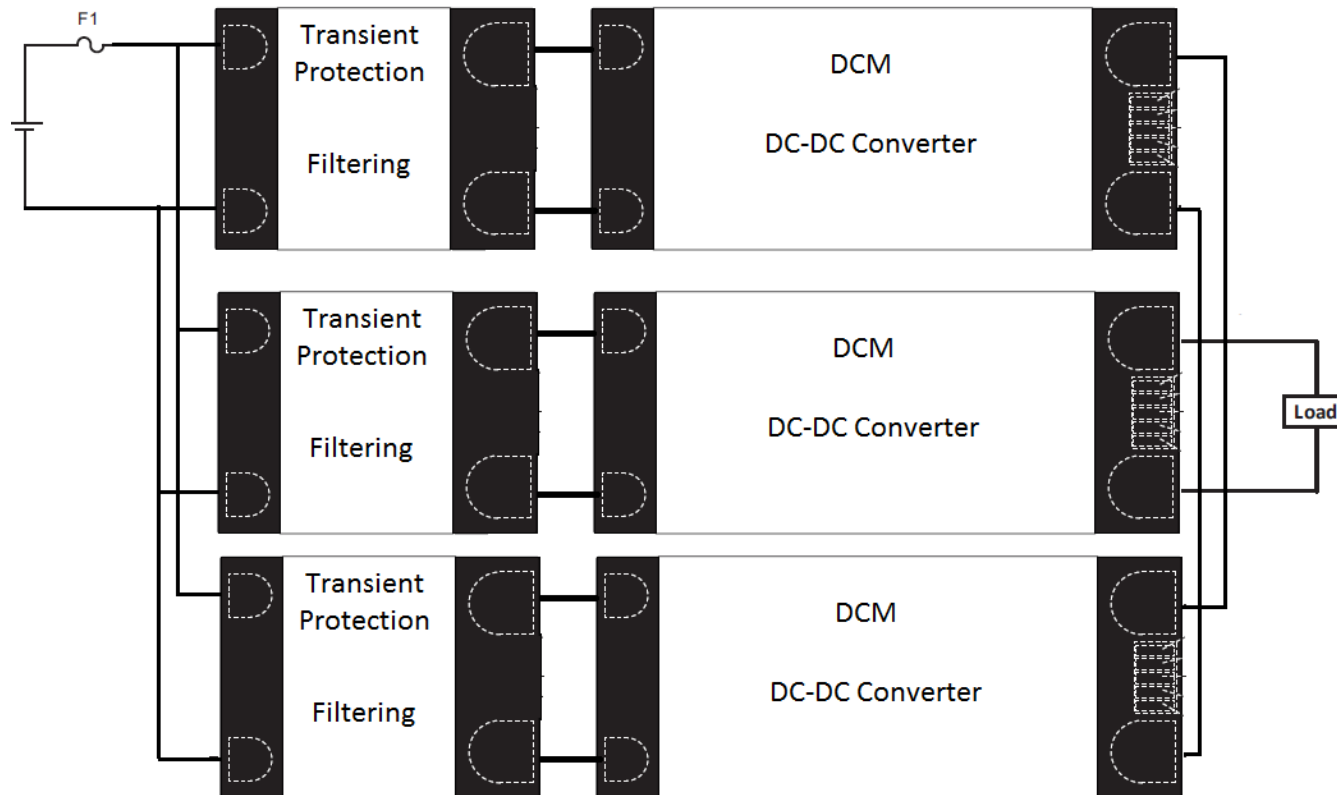

- › Configuring the power supply to deliver the average power to the load
- › A capacitor is used to deliver the peak power to the load

## Power Averaging: Criteria

- › Periodic load
- › The load has a wide input range
- › The max on-time and min off-time are known
- › Space and weight are critical

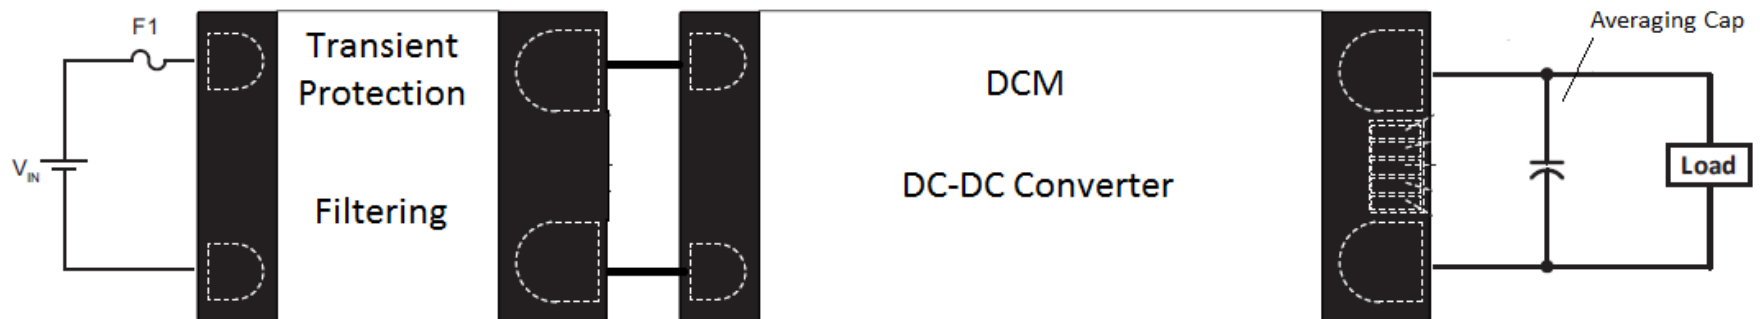

## Power Configuration: Typical Approach

900 Watt Periodic Load 25% Duty Cycle

## Power Configuration: Averaging Approach

900 Watt Periodic Load 25% Duty Cycle

## **Solution Sizing: Capacitor Selection**

- › Peak load power
- › Maximum load on time
- › Minimum load off time
- › Load input voltage range

## Solution Sizing: Capacitor Selection

$$C = 2 \times \frac{P \times (T_1 - T_2)}{(V_1 - V_2)^2}$$

$C$  = capacitor value

$T_1 - T_2$  = load ON duration

$V_1 - V_2$  = voltage drop at capacitor during load ON

## Solution Sizing: Power Supply Selection

- › Capable of recharging the capacitor to initial voltage
- › **Must be** stable during operation
- › **Must be** capable of operating in current limit
- › **Must be** capable of operating in power limit

## Solution Sizing: Power Supply Selection

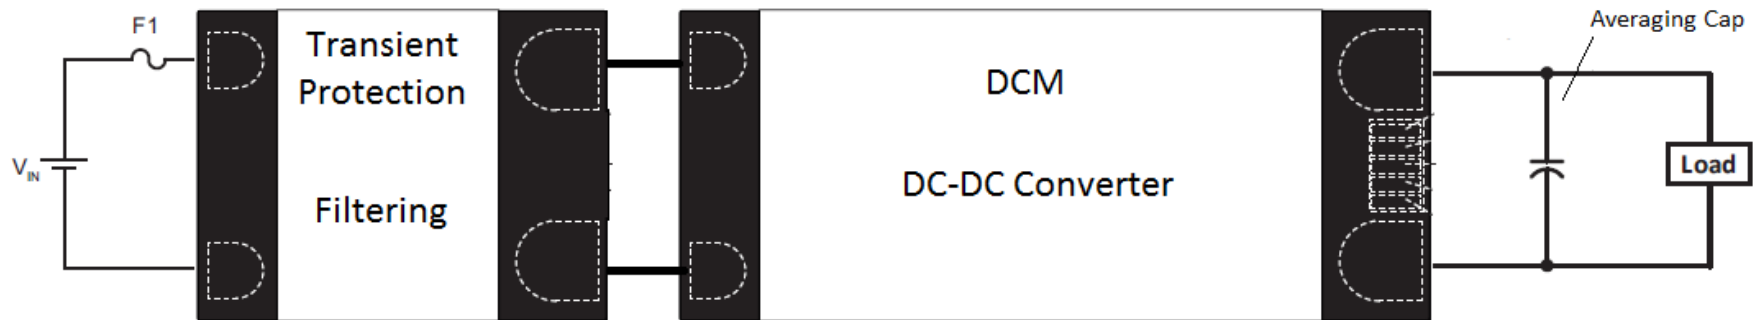

## Solution Sizing: Power Supply Selection

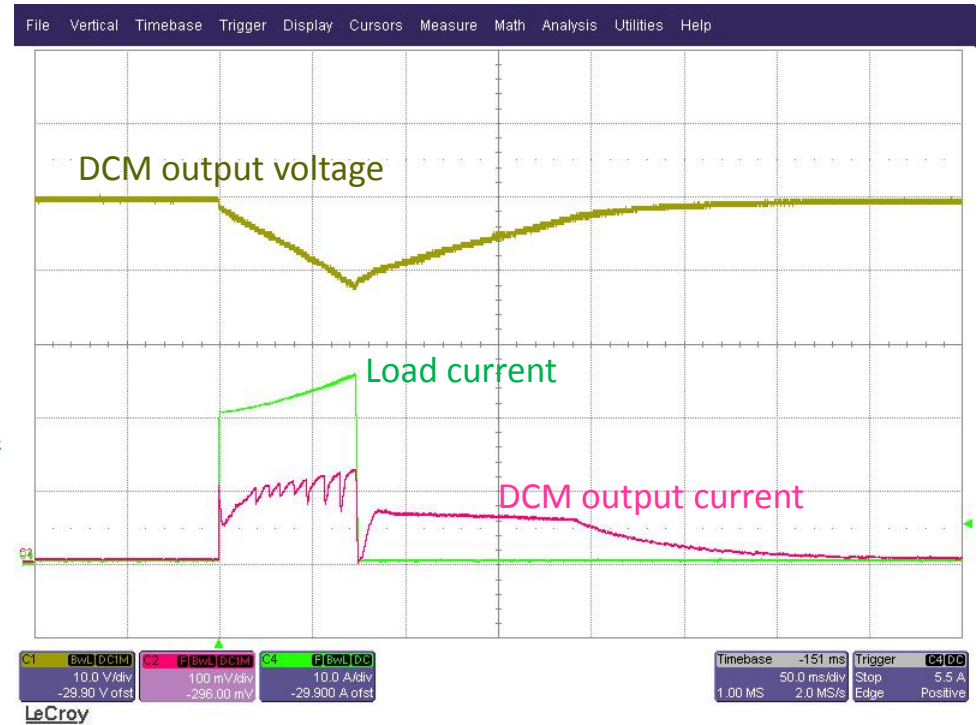

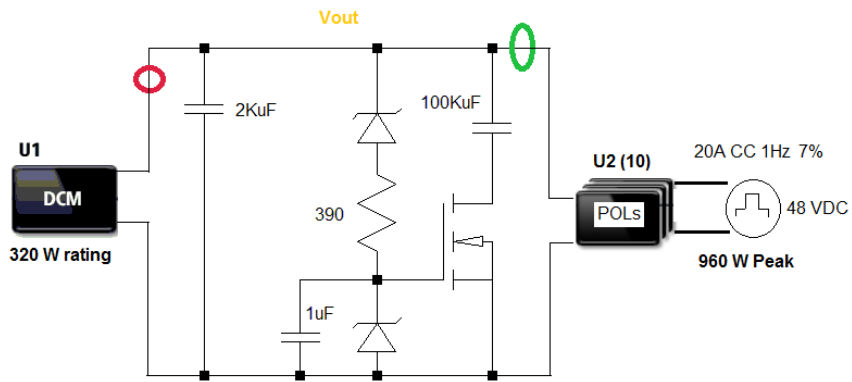

$$I = C \times \frac{dV}{dt}$$

## Power Averaging: Configuration

## Power Averaging: Example

## Power System Designer™

VICOR PowerBench™

[Vicor Website](#) | [All PowerBench Tools](#) | [Provide Feedback](#)

*Vicor's Power System Designer provides system designers unprecedented flexibility to architect and optimize end-to-end power subsystems. Choose to find a solution for a single output or multiple outputs. Vicor's Power System Designer can do both.*

☐ Search for a single output solution

☒ Search for a multiple output solution

### Power Utilization

45.0% (225.1W) Used  
55.0% (274.9W) Available

## Conclusion

### **Power Averaging**

1. **Saves** system weight
2. **Saves** system space
3. **Saves** system cost
