Automotive- New Serial Standards

Trends

- Standardization
- Full-Duplex Signaling
- Modulated signals (PAM3 / PAM4 / PAM16)

New standards

- 10BASE-T1 (IEEE 10mbps)
- 10GBASE-T1 (IEEE 10gbps)
- A-PHY (MIPI 12gbps)
- HDBASE-T (1-6gbps)
- 25G Ethernet
- Automotive Optical Ethernet

IEEE

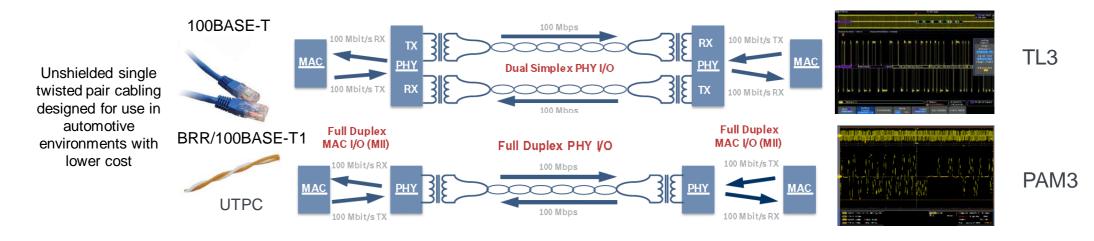

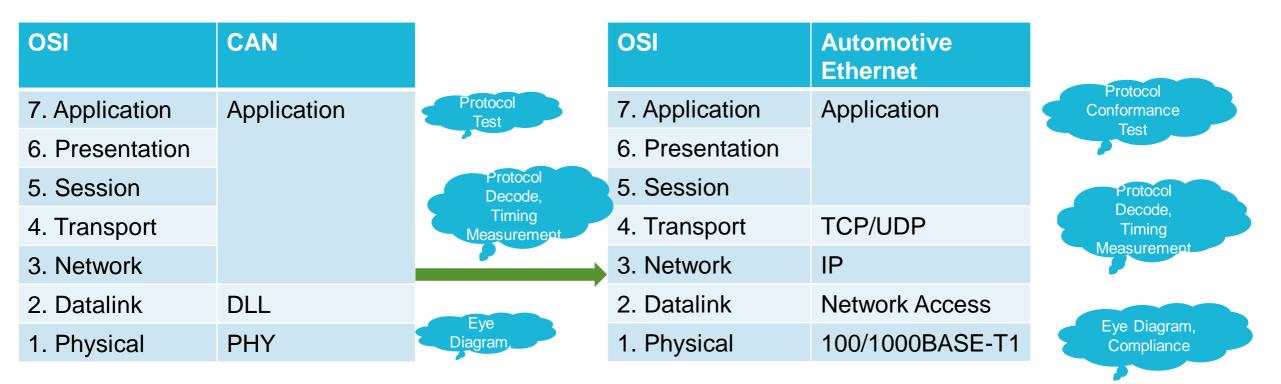

Automotive Ethernet Standard

- IEEE Ethernet derivative standard (BroadR-Reach) created by an industry alliance (OABR)
- IEEE has established its own standards 100BASE-T1 (P802.3bw[™]) and 1000BASE-T1 (802.3bp[™])
- Initial deployment focused on 100 Mb/s and 1 Gb/s, early development underway for 10Gbps
- Unshielded single twisted pair cabling designed for automotive use and lower cost
- PAM3 Modulation: Slow rise time, reduces EMI
- Full-Duplex Communication: Reduces cable and increases effective bandwidth

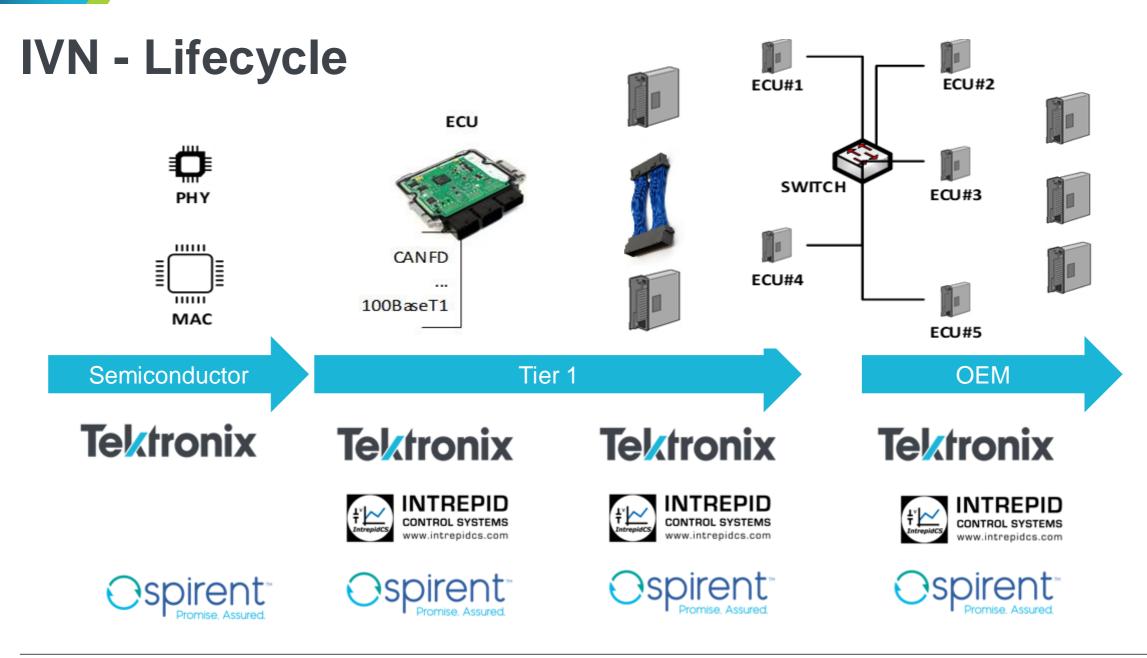

Automotive Ethernet Test Requirement

CAN TO AUTOMOTIVE ETHERNET

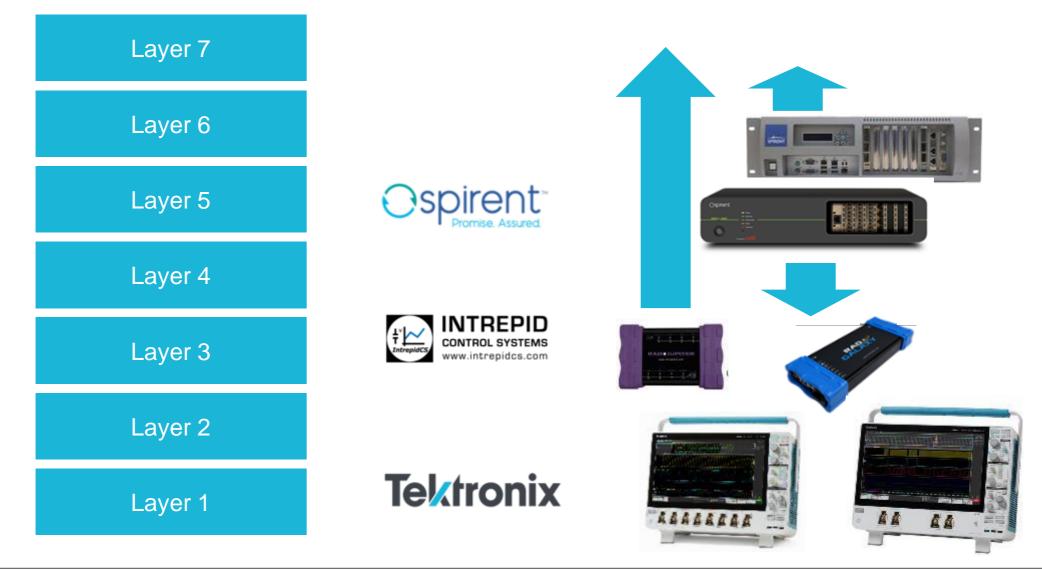

Automotive Ethernet - Compliance Test

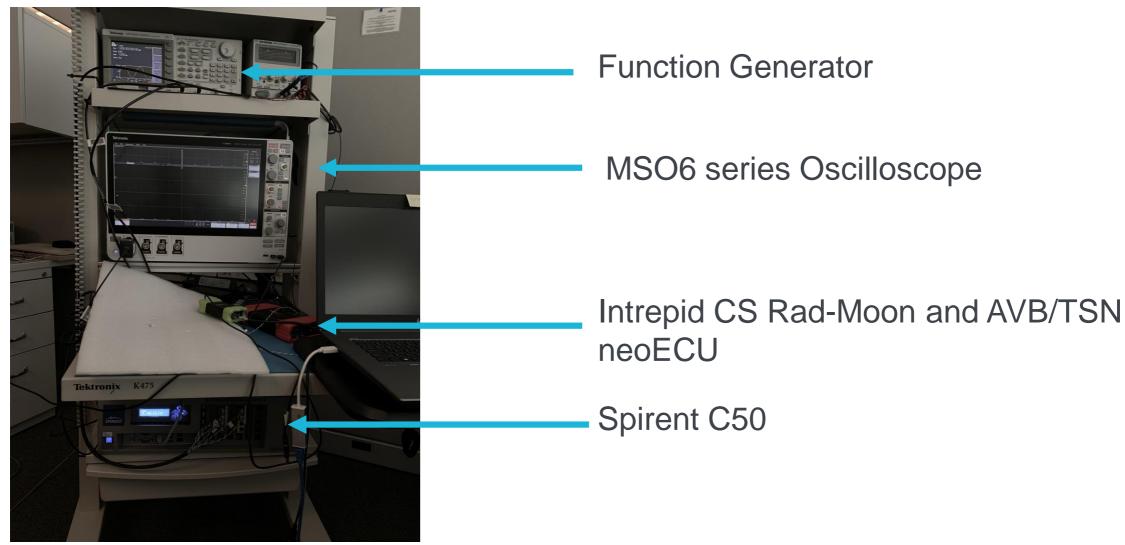

IVN – Network Layers

Example of Integrated solution

Automotive Ethernet PMA Compliance Test

High Impedance

Differential Probe

100 Ohm

Digital

Oscilloscope/

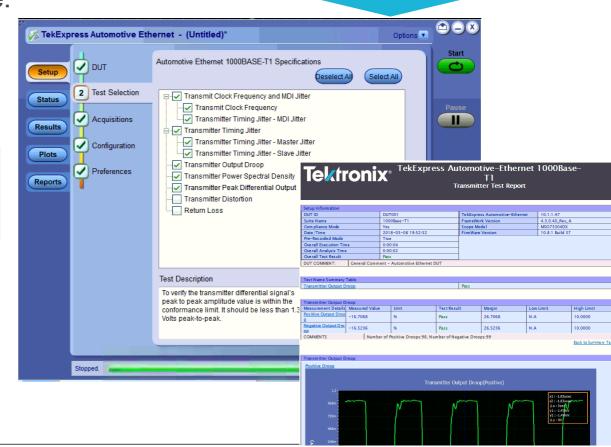

Data Acq.

- PHY Media Attachment Compliance Test
- PHY test mode configuration should be provided by PHY vendor

Transmitter

Under Test

- Transceiver PHY electrical test requirements include:
 - Maximum Output Droop
 - Timing Jitter (master/slave)
 - MDI Output Jitter
 - Distortion
 - Power Spectral Densit
 - Clock Frequency
 - MDI Return Loss
 - Peak Differential Output

IEEE P802.3bw™/D3.3

Pair Cable (100BASE-T1)

Automotive Ethernet - Eye Diagram Test

Eye Diagram Test- Use case

Customer	DUT Type	DUT	Job to be done
PHY silicon companies	100BASE-T1 PHY Silicon		PHY performance in different Noise condition (Signal Quality Test)
T1 System Integrator and Cable companies	ECU		ECU Performance test under Noise condition (Signal Quality Test)
	System: ECU to ECU, ECU to Sensor	ECUT ECUT Image: Comparison of the compariso	System performance Test with different ECUs or different cable type
	Production ECU		 Performance test Manufacturing variation Test
OEM	Car with Automotive Interface		 Performance test under various scenario Cracking DC Motor System level Debug

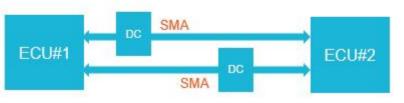

Eye Diagram Test challenge-1

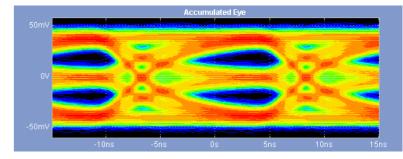

Eye Diagram Test challenge-2

• Directional Coupler:

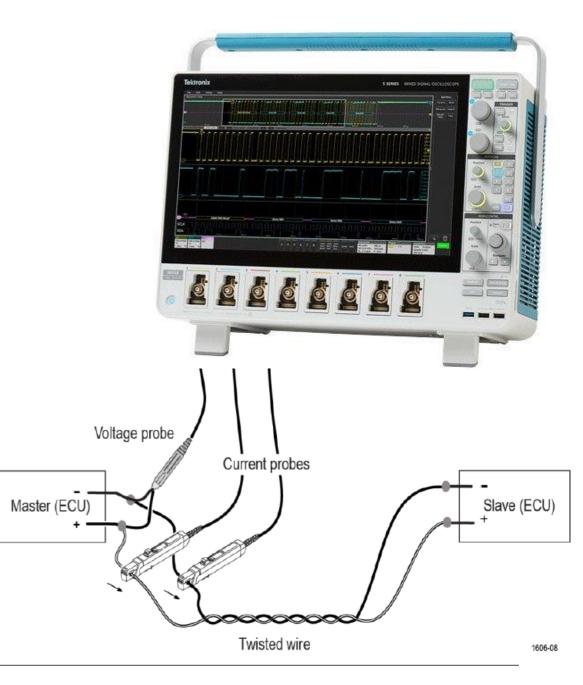

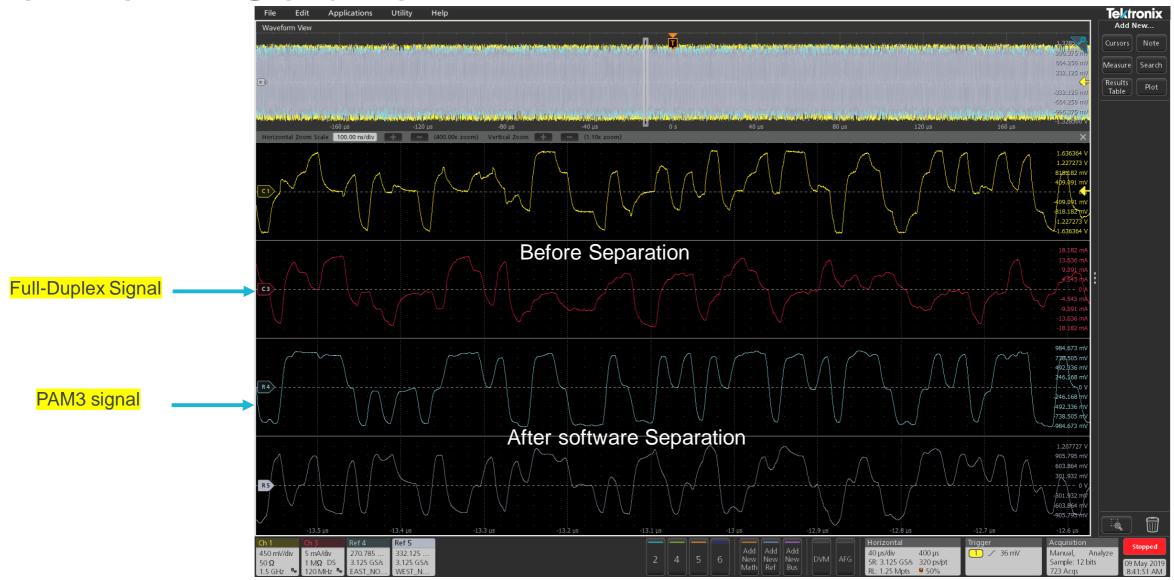

- Challenges:
 - Cut the cable and disturb the system
 - Directional coupler works on Directivity principle, would not show true Signal for Signal Integrity test
 - Insertion loss, Reflection, Mode conversion loss

Signal Separation

- Tektronix unique (Patent pending) Automotive Ethernet Signal separation solution using Voltage and Current waveform
- Proprietary method to separate Fullduplex signal using Current waveform and Full-Duplex Voltage waveform
- Direct access Probing, no need to break cable, No loading on ECU system
- Provides Master and Slave separated signal

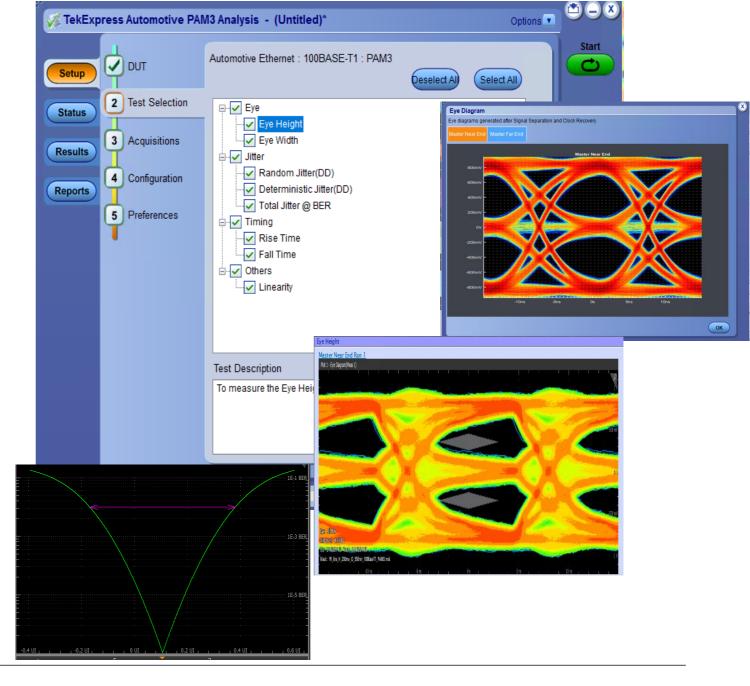

Tektronix Solution

PAM3 Analysis

- Software clock recovery
- PAM3 Eye Height and Width
- PAM3 Linearity
- Jitter Separation
- Bathtub curve (BER)
- Eye Mask test

DEMO

Automotive Ethernet Test setup

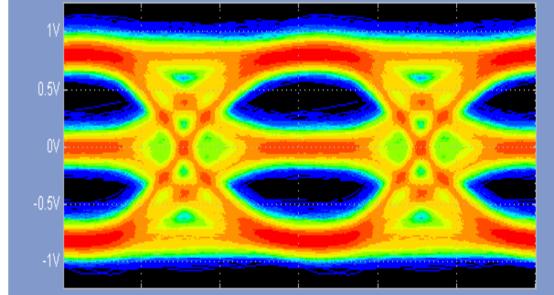

Advantage of Signal Separation

- Ability to see the "real" signal without Insertion Loss which increases diagnosis accuracy
- Easier test set up reduces total test time
- Protocol and Physical layer view in single window to debug faster
- Entire automotive life cycle functions from design through service/maintenance and was designed with ease-of-use in mind

Ordering configuration

- Oscilloscope: 5/6 series MSO
 - 1 GHz minimum bandwidth (100BASET1)
- Software:
 - 5/6-AUTOEN-SS: Signal Separation
 - 5/6-PAM3: PAM3 Signal Analysis (Prerequisite: 5/6-AUTOEN-SS, DPOJET)
 - 5/6-SRAUTOEN1: 100BASE-T1 Protocol Decode (Prerequisite: 5/6-AUTOEN-SS)
- Probes: TDP1500 (1 or 2 no): Voltage probe TCP0030A (1 or 2 no)- Current Probe
- Fixtures: ECU dependent

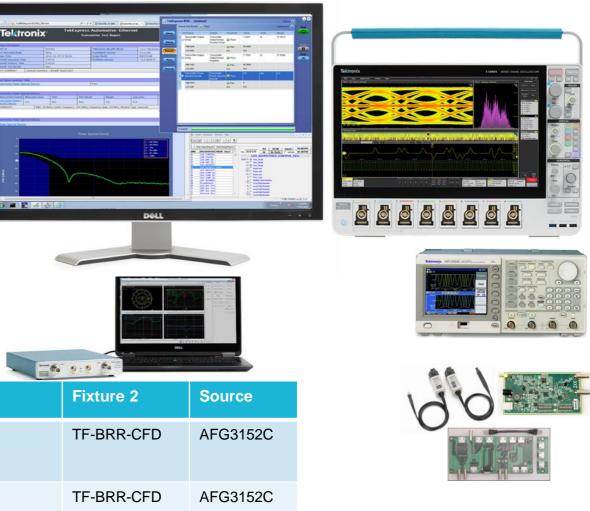

Accumulated Eve

Scope	Scope Options	Probes	Fixture
MSO 5/6 Series	1 GHz bandwidth, Windows, 5/6-AUTOEN-SS, 5/6-PAM3, 5/6-SRAUTOEN1	TDP1500 TCP0030A/P6022	ECU Dependent

Automotive Ethernet Compliance Solution

- Oscilloscope: 5/6 series MSO, MSO/DPO5KB, DPO7KC/70KC
 - 1 GHz minimum bandwidth (100BASET1)
 - 2GHz Minimum bandwidth (1000BASET1)
- Software:
 - 5/6-CMAUTOEN: 1000BASE-T1/100BASE-T1 compliance
 - Optional Advanced jitter software
- Probes: TDP1500 (1 no)- 100BASET1, 2 no for RL TDP3500 (1 no)- 1000BASET1, 2 no for RL
- Signal source: Distortion Test only: AFG3152C
 RL and Distortion: AWG5200

•	Scope	Scope Options	Probes	Fixture 1	Fixture 2	Source	
	5/6 Series	2 GHz bandwidth, Windows, 5/6- SR AUTO, 5/6-DJA, 5/6- CMAUTOEN	TDP1500 Or TDP3500	TF-XGbT	TF-BRR-CFD	AFG3152C	
	DPO5K/7K/70K	> 2 GHz bandwidth, BRR, DJA, SR-AUTO	TDP1500 Or TDP3500 (VPI Connector)	TF-XGbT	TF-BRR-CFD	AFG3152C
